1.0 OBJECTIVE

This report presents the qualification or approval status of major critical components on the Mercury portion of WS107A-1. All components are operating, non-standard, airborne CFE components.

This report is submitted in compliance with:

- S.O. 11-1-577, CCN 721 of contract AF04(647)-299
- S.O. 92-1-79, CCN 85 of contract AF04(647)-635
- S.O. 89-1-71, CCN 70 of contract AF04(647)-699

2.0 SUMMARY

There are 144 major critical components included in this report. One hundred-thirty-six (136) are subject to qualification testing. The test status of components subject to test are as follows:

Qualified by

PPT	47	
FPT	7	
BOS	45	
Oth		
Evaluation Tests (Modified Commercial Parts)	8	
Similarity to qualified units plus additional tests	20	
Total qualified		127

To be qualified by

PPT	4	
FPT	1	
BOS	3	
Oth		
Similarity to qualified units plus additional tests	0	
Total to be qualified		8

Not to be used

Rejected for Missile use (Design not acceptable)	1	
Additional testing required	0	
Total not to be used		1
Total subject to test		136

2.1 No additional types of components have been added in this issue.

3.0 CODING

Column entries in the summary sheets reflect pertinent information as described in paragraph 3.1 through paragraph 3.7.

3.1 PART NUMBER Column

Part numbers, specification numbers, and vendors name are listed in the order indicated in the column heading. If a number is not applicable or a number has not been assigned, dashes will be entered to indicate such omission and maintain descending continuity.

3.2 EFFECTIVITY Column

The effectivity of the listed part is indicated by the manufacturing sequence numbers for Mercury boosters.

3.3 NOMENCLATURE Column

Nomenclature will be that appearing on the contractor's release records or drawings.

3.4 MAD APPR Columns

The Military Approval Designee does not review equipment peculiar to the Mercury program, since such a review is not required by contract. The MAD approval status shown is for equipment common to tactical programs and is listed for reference only.

The current CCN's do not require this entry in this report; therefore, it will be deleted in future issues.

An "A" entry in the ENGR column indicates approval by the Military Approval Designee of the procurement specification. An "R" entry indicates rejection.

An "A" entry in the IDE column indicates approval by the Military Approval Designee of the detail drawings, test procedures, and test reports. An "R" entry indicates rejection.

An "A" entry in the INSTL column indicates approval by the Military Approval Designee of the application of the unit. An "R" entry indicates rejection.

A dash (-) in the MAD APPR columns indicates there has been no approval or rejection to date.

3.5 CRIT COMP Column

A "C" entry in the column indicates that the item has been considered critical by the customer and is listed in attachments to CCN 70 to Contract AFO4(647)-699, CCN 85 to contract AFO4(647)-635 and CCN 721 to contract AFO4(647)-299. The item requires monthly reporting in compliance with above contracts.

3.6 QUAL BY Column

Entries in the QUAL BY column indicate the method by which the item is qualified. A "PPT" entry indicates that the item was or will be qualified by preproduction tests in accordance with Convair Specification 7-00209B. A "BOS" entry indicates that the item was or will be qualified on the basis of similarity to a previously-qualified item. An "FPT" entry indicates that the item was or will be flight proof tested in accordance with Convair Specification 7-00210B. An "OTH" entry indicates that the item was or will be qualified by means other than those given above.

3.7 TEST SCHED Column

Column entries indicate requirements for test schedules; they do not indicate requirements for testing. "Date" entries in the column indicate time spans for the test schedules. "Completed" entries indicate the test schedules are complete. "Not required" entries indicate schedules are not required; the entries do not indicate tests are not required since qualification may be demonstrated by similarity to previously qualified items or by another manner of qualification.

3.8 REVISION/ADDITION CODING

A horizontal bar in the lower margin of a page indicates the page is new or revised for the current issue of the report. See example at bottom of this page.

MERCURY

MAJOR CRITICAL COMPONENTS

HYDRAULICS

There are 30 major critical components included in this section. Seventeen units were preproduction tested, one unit is not for missile use, and ten units were approved based on similarity to preproduction tested units and nine of the ten received some additional testing. Two other units will also be approved based on similarity to preproduction tested units, but still require some additional testing.

The 27-08573-1 actuator cylinder manufactured by the Bohanan company will not be used on any missiles because of inherent structural weaknesses. The actuator was included in the basic issue of this report in compliance with references e, f, and g.

The 27-08569-1 valve was preproduction tested, but because of unstable operation in other tests, the valve is being subjected to a revised IAT procedure. See Note.

The 27-08573-3 and 27-08574-801 vernier servo cylinders, manufactured by Clemco, have successfully passed first level search-for-critical-weakness tests and PET tests and are considered by the Design Group to be satisfactory for flight use.

NOTE

The 27-08569-1, and 27-08561-1 relief valves, 27-08590-1, -3 sustainer hydraulic pumps have failed recent tests. Before any of these units are released for flight, Hydraulic Design or Systems Engineering Groups must be contacted for most recent information. See individual components listed in this section for additional information.

MERCURY TEST SUMMARY										HYDRAULICS

			ENGR	IDE	INSTL				TEST SCHED		
27-08550-5 27-08550J 27-04202K Moog Valve M-7773	100D Only	Servo Cylinder - Booster Hydraulic	-	-	-	C	PPT	(5/61) The 27-08550-5 Servo-Cylinder was PPT by the vendor per 27-04202 specification and reported in Report MR 322, ADD I. CV/A approved the 27-08550-5 PPT on VAF MC 29093 dated 6-26-59. NOTE: This unit reworked to a 27-87068-7 servo-cylinder by replacing the integral filter with an improved filter. (10-61) NOTE This unit is not to be used on any Mercury vehicle.	Completed June 1959

Additional testing is reported in ETL reports, number 7A2311 and 7A576. The basic differences between the -7 and the -1 are minor bleed port changes and a locking device which was functionally evaluated and tested in the -7 cylinder. Specification was revised to K revision. Difference between specification 27-04202K and the basic specification required additional testing on the transducer which is a sub-component of the cylinder assembly. The test has been completed and reported in Collins test report P/N 104723; report is currently being reviewed by servo-mechanism design group. GD/A design group approved PPT on VAF MC 36974, dated 9-8-59.	Complete	Sept. 1959

The PPT data is recorded in reports 5844, Addendum II, dated 8-26-58 and 5844, Addendum III, dated 3-18-59. GD/A design approved PPT in VAF MC 27835 dated 2-24-59. <u>NOTE</u> 1. Unit has an in-service history of precharge gas pressure leakage past the piston and into the hydraulic system. 2. Unit is being investigated for possible redesign action to prevent this leakage in future installations. 3. This item is subject to additional PPT, dependent on MAD evaluation of revised specification requirements.	Complete March 1959

GD/A design group approved the 27-08561-1 valve in VAF 39330, dated 10-21-59. <u>NOTE</u> Investigation of recent PEF test failures have disclosed that material problems may have caused the scoring of body and valve poppet. Several units have since had the poppets hard chrome plated and are now being tested to determine if the problem is resolved.	Complete Oct. 1959

27-08564-803 27-08564A 27-08512D Purolator Products 64988-1	103D 107D 109D 113D 130D 144D 152D 167D	Filter - Fluid, Hydraulic System, Missileborne	-	-	-	C	oth	(6-61) (10-61) The 27-08564-803 filter was approved based on similarity to 27-08564-5 and -801, which were preproduction tested, plus additional tests presented in report 2417. The 27-08564-803 filter differs from the -5 and -801 filters in that the -803 uses a weldable aluminum case to mount the filter instead of the 2024T4 used in the -5 and -801. GD/A design group approved the 27-08564-803, specification 27-08512C, on VAF 27-08564-803 LA 001 dated 5-9-61. Additional tests, bubble coefficient, are being conducted to satisfy D revision of the specification. Filter is mounted on the sustainer servo cylinder pressure inlet. RAR 92-10-617, dated 7-6-60, references ECP 529 which recommends the replacement of the 27-08564-801 with 27-08564-803 filter which is made of 6061 aluminum alloy. Effectivity was for all hardware still in xistance; therefore it picked up 77D, 88', 93D, and 100D effectivity for the -803 filter.	Comp. etc May 1961

27-08566-1 27-08566B 27-08505B Vickers, Inc. AA-60694-R2A	77D 88D 93D 100D 103D 107D 109D 113D 130D 144D 152D 167D	Pump - Hydraulic, Booster	-	-	-	C	BOS	(5-61) (10-61) Approved based on similarity to 7-08207 which was preproduction tested to specification 7-08207D, per Vickers test order 13302, dated 2-8-57 and 13302-1, dated 6-4-57. Based on similarity qualification was approved in VAF 5435, MC 20198 on 9-20-58, LA-001, 5-26-61. Difference between 7-08207 and 27-08566-1 is an O-ring change for high temperature and inlet and outlet port changes to agree to D system requirements. Difference between the 7-08207D specification and 27-08505B specification calls for improved quality testing with special emphasis on degree of cleanliness for GD/A requirements.	Completed May 1961

A-61071	77D 88D 93D 100D 103D 107D 109D 113D 130D 144D 152D 167D	Valve- Safety, Relief, Hydraulic	-	-	-	C	PPT	(6-61) (10-61) Two 27-08569-1 relief valves were pre-production tested. The results were reported in Wyle Lab report 6608, dated 1-30-59, Vinson Report QTR 61071, dated 9-15-60 and Garwood Labs 1855, dated 8-8-60. The tests were conducted as required by the unit procurement specification 27-08501. GD/A design group approved the 27-08569-1 valve on VAF LA001 and LA002 on 8-30-61/ Vinson Mfg. report QTR 61071, Add I, II, III. <u>NOTE</u> 1. Recent investigation of PET failures of this valve have shown that poppet and valve body materials were deeply scored. Several tests are now in progress incorporating a chrome plated poppet to prevent the scoring problem. Before any units are released for flight, the hydraulic design group must be contacted for the most recent information. 2. This unit is subject to additional preproduction tests dependent on QAD evaluation and resolution of revised specification requirements.	Complete May 1961		

27-08569

27-08245-13 27-08245-1 27-08101M (27-08101-25) B. H. Hadley Co. 10701-7	77D 88D 93D 100D 103D 107D 109D 113D 150D 144D 152D 167D	Regulator Assembly - Pressure, Oxidizer Tank	A	-	C	BOS	(5/61) The 27-08245-13 (27-08101-25) regulator is specially tested but otherwise identical to the 27-08245-3 regulator. The 27-08245-13 regulators are selected for best transient response and maximum reliability for specific use on the Mercury program. Similarity of the 27-08245-3 regulator to the 27-08101-1 is established by VAF 41967. Two 27-08101-1 regulators were preproduction tested per Test Report numbers 1080 and 1081, and the results approved by VAF 41254 and 41255, dated 12-7-59. (11-61) The item was approved per revision K of the specification. Revision M added vendor and vendor part number.	Completed Jan. 1960

27-08245

Qualified by GD/A test laboratory.
Engineering evaluation and preproduction tests were conducted on 4 units (serial numbers A298-1, A298-2, -3 and -5).
The PPT was recorded in Report 7A2324, dated 8-19-59.

MERCURY

MAJOR CRITICAL COMPONENTS

PROPELLANT UTILIZATION

None of the items in the propellant utilization system require further approval action prior to flight.

Testing on both liquid oxygen transducer assemblies is complete. The test report is being evaluated. These transducer assemblies are part of the propellant loading system and replace assemblies used on early D series missiles.

The -811 unit will be qualified by similarity to the -801 unit plus proof cycle, shock, vibration, and life tests, all of which have been completed. The test report (27A1136) is being evaluated.	See Remarks

MERCURY
MAJOR CRITICAL COMPONENTS
ELECTRICAL

The electrical system is composed of batteries, inverters, power changeover switch, distribution harnesses, and miscellaneous switches, relays, and connectors.

All items have been preproduction, flight proof tested, and/or approved on the basis of similarities, with exception of the harnesses and abort sensing relay.

The harnesses are fabricated to MIL-W-8160 specification requirements.

Flight proof testing on the abort sensing relay 27-61147-805 is in progress, and scheduled to be completed in November 1961.

In some instances, where items have not conformed to MIL-I-6181B and MIL-I-26600 test requirements, deviation requests have been processed and submitted for APBSD approval.

The noise generated by action of the thermostatic heater switches used in the missileborne batteries exceeds the limits (conducted interference, and radiated interference) of MIL-I-6181B and MIL-I-26600 test requirements. The battery heaters and the thermostatic heater switches are nonoperative during flight. During countdown operation the heaters cycle on and off at intervals of about 10 to 15 minutes; the excessive noise exists for less than one second, when switches open and close.

MERCURY

MAJOR CRITICAL COMPONENTS

TELEMETRY

There are seven items in this section. Six were approved based on similarity to previously qualified items. One item, the lightweight TLM package for 100D, was flight proof tested and approved.

A deviation, ECP CAC-107A-334-98, has been approved for all 27-12290 assemblies.

New dash numbers have been created for the 27-12290 units. The reasons for the changes, and their effectivities, are listed on pages 9-6, -7, and -8.

One specimen has been preproduction tested at GD/A as reported in Test Report No. 7A2055, dated 6-8-59. Test report has been reviewed and approved by cognizant engineers.

Deviation request, ECP - CAC-107A-334-133, has been submitted to waive the test requirements of MIL-I-26600.

NOTE

(a) Facility equipment could not attain operating altitude of 1.0 mm of Hg. Altitude attained was 1.5 mm of Hg.

(b) Shipping vibration omitted because of lack of shipping container.

(c) Toggle switches replaced by single-pole knife switches.

MAJOR CRITICAL COMPONENTS

AZUSA

All transponders have been delivered to AFMTC by General Dynamics/Astronautics. The transponders are now GFE items and GD/A has no control of the various configurations.

Two specimens of the basic unit, 28-10002-1, were flight proof tested. One unit was subjected to temperature, altitude, humidity, vibration, acceleration, and shock tests. The other unit was subjected to life and RF tests. Phase-lock and klystron failures were encountered but were corrected, and the test requirements were met. The various dash number configurations consist of modifications of the crystal filter characteristics, and the units are approved based on similarity to the basic unit.

			ENGR	INSTL	APPR				START	COMPL	
26-10002-1 thru -815 AZD 26-001 (Component Spec.) GD/A 26-10002-1 thru -815	*	Transponder, B-Coherent	-	-	-	C	BOS	(5-61) * GD/A has delivered all transponders to AFMTC thus they became GFE items. GD/A has no control of dash numbers assigned for specific Mercury missiles. All dash numbers through -815 are approved on the basis of similarity to -1 which has been flight proof tested. (See Test Report 7A1766R, dated 12-17-58 and AZN-26-050, dated 9-10-58) The major change among various dash numbers is the use of a crystal filter. Two specimens have been tested. S/N 189 has been subjected to temperature, altitude, humidity, vibration, acceleration, and shock tests. S/N 174 has been subjected to RF and life tests. <u>NOTE</u> Specimens failed to meet phase lock parameter requirements during temperature (+120°F), vibration, acceleration, and life tests. The klystron failed during the acceleration test. Specimens were readjusted or repaired and testing was repeated until it passed the test requirements.	Completed		

MERCURY

MAJOR CRITICAL COMPONENTS

ABORT SENSING AND IMPLEMENTATION

None of the abort sensing and implementation system components require further action or approval.

Pressure switches 87-44900-356 and 87-44900-355 supersede switches 87-44900-372 and 87-44900-374, respectively. Search for critical weakness tests and life tests have shown that the superseding parts exhibit increased reliability.

The Abort Sensing and Control Unit 27-11111-835 supersedes 27-11111-833 due to the use of fiber washers for motor mounting and changes in the null voltage suppression circuit.

A deviation request, ECP CAC-107A-344-102 has been approved for all 27-11111 units. The unit did not meet the requirements of MIL-1-26600 since it exceeded the conducted and radiated interference limits. These conditions did not degrade missile performance, as judged by cognizant engineering.

27-11111-835	77D	Abort Sensing and Control Unit	-	-	C	BOS	(10-61)	Completed	April 1961
- - - - -	93D						Approved based on similarity to the -825 unit. The changes on the -831 unit resulting in the -833 unit consist only in the use of "blue dot" transformers and decreasing the length of the magnetic amplifier mounting studs.		
7-00210B	103D						The changes to -833 for the -835 consist of using fiber washers for motor mountings, replacing two diodes with resistors, and changing two resistance values in the magnetic amplifier null voltage suppression circuit. The circuit changes prohibit high null voltage output which would prevent drop-out of the capsule fail detection relays in case of an abort.

MERCURY
MAJOR CRITICAL COMPONENTS
AUTOPILOT

None of the items in the Autopilot section require further approval action prior to flight. FPT tests on the gyro rate and displacement group and the remote rate group have been completed and the preproduction test is in progress. These assemblies contain gyros with spin motor rotation detectors. Preproduction testing on the new displacement gyros is in progress. Flight proof tests are complete and preproduction tests are in progress on the new rate gyro.

The alternate vendor for 27-04204-1, 27-04205-1, 27-04208-1, 27-04209-1 and 27-04211-1 have been eliminated as sources for these items; therefore, these items have been removed from this report.

27-04206-1	77D	Valve-Flow, Limiter,				C	PPT	(5-61)	Completed	Dec. 1958	
27-04206C	88D	Hydraulic						One 27-04206-1 unit was tested to specification 27-04218A by Sterer Corp. and reported in test report 13000.			
27-04218D	93D							Autopilot design group approved the 27-04206-1 on VAF MC 22873, dated 12-1-58.			
Sterer	100D							(11-61)			
13000	103D							Specification was revised to D revision.			
	107D							The specification revisions require more severe fluid temperature and proof cycle tests.			
	109D							Ten specimens were subjected to search-for-critical-weakness tests and no failures were experienced. However, slight out-of-tolerance conditions were noted in all specimens.

7-45435-3	77D	Fitting Assembly, First Stage Separation	-	-	-	PPT	Complete April 1959 (5/61) Twenty units were subjected to require- ments of 7-00209B by CV/A in 7A1812 dated 4-10-59. As a result of corro- sion, four untreated and unlubricated fittings failed to operate after the environmental tests. Two untreated but lubricated fittings operated even though corroded. The remaining units were treated with several different materials. Although some corrosion was present, all the units operated satisfactorily. All production units are now being manufactured with a finish which pre- vents corrosion.

MAJOR CRITICAL COMPONENTS

ANTENNA

This section covers TLM RSC, AZUSA, MOD III guidance antenna assemblies, TLM RSC ring couplers and MOD III guidance wave guides.

Antennas and ring couplers have been tested and/or approved on the basis of similarity to qualified items.

AZUSA antenna is qualified on the basis of similarity to an antenna which was flight proof tested.

Standard VSWR measurement tests were performed on waveguide assemblies.

				ENGR	IDE	INSTL				START COMPL	
27-12507-1		77D	Antenna Assembly, TLM/ RSC, (B-1 Pod)	-	-	-		PPT	(6-61) Two specimens have been preproduction tested at GD/A (Test Reports 7A1830, dated 6-20-59 and 7A2083, dated 6-29-59). NOTE: Both specimens developed cracks at four places between the double mounting holes and the tank line mounting holes. Failures were caused by an inadequate vibration fixture. The vibration fixture was modified on a third specimen and the specimen subjected to vibration tests. The specimen successfully passed the tests.	Completed
